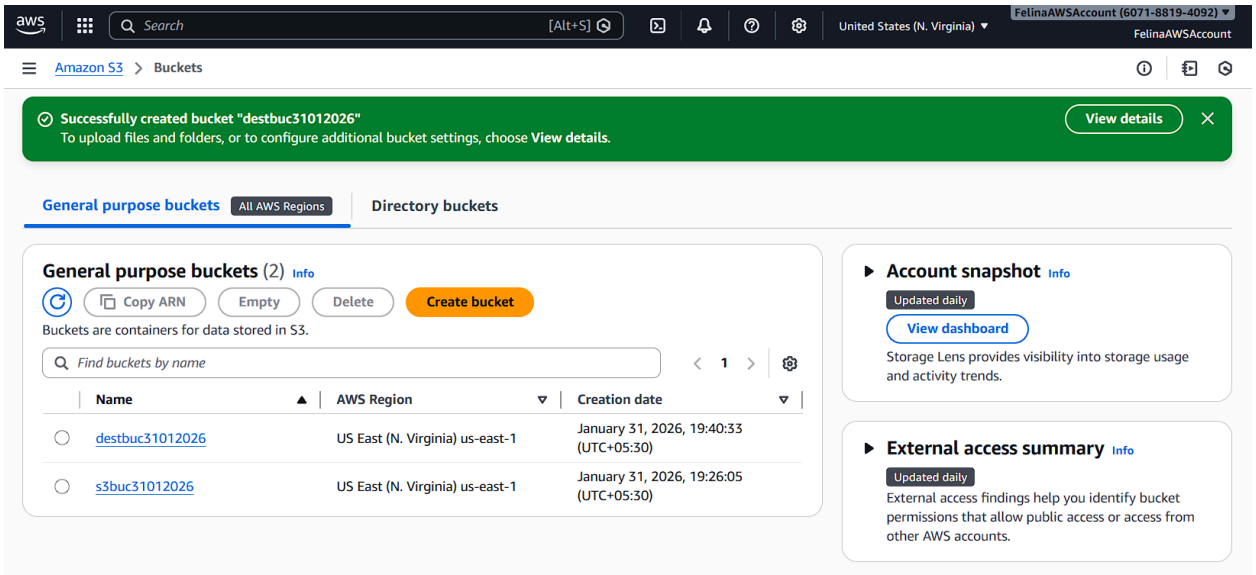
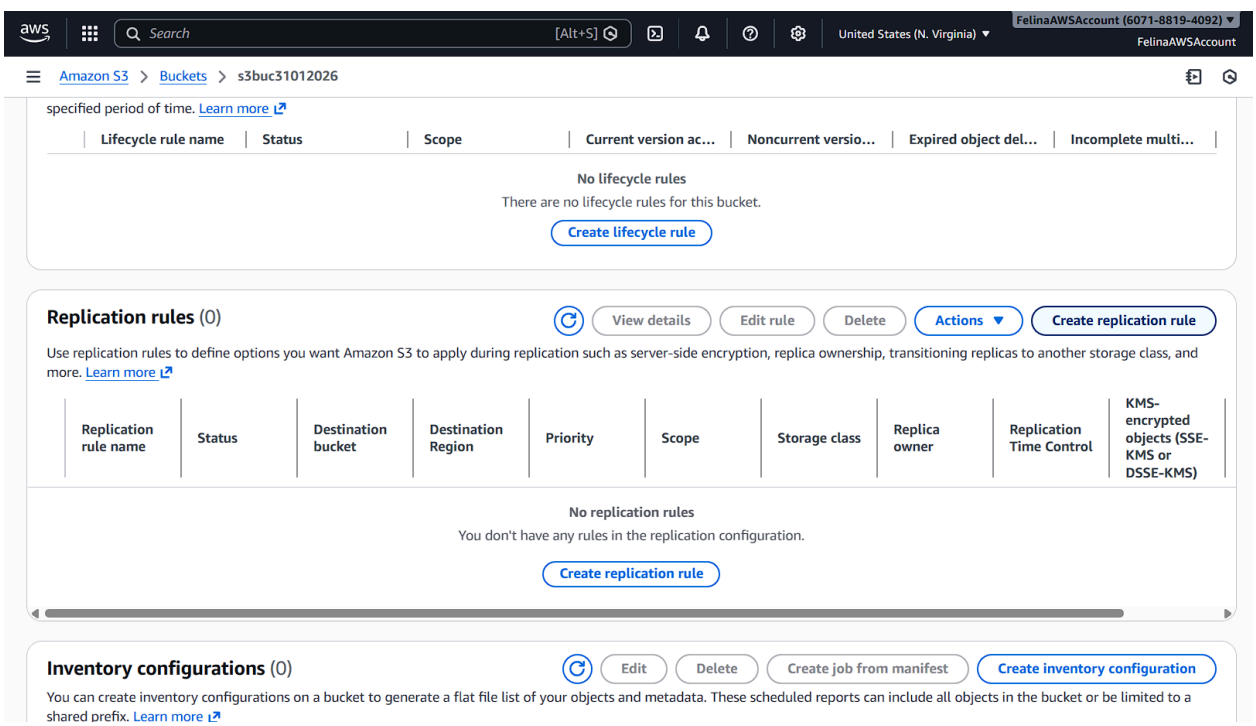
EXPERIMENT 13
S3 REPLICATION

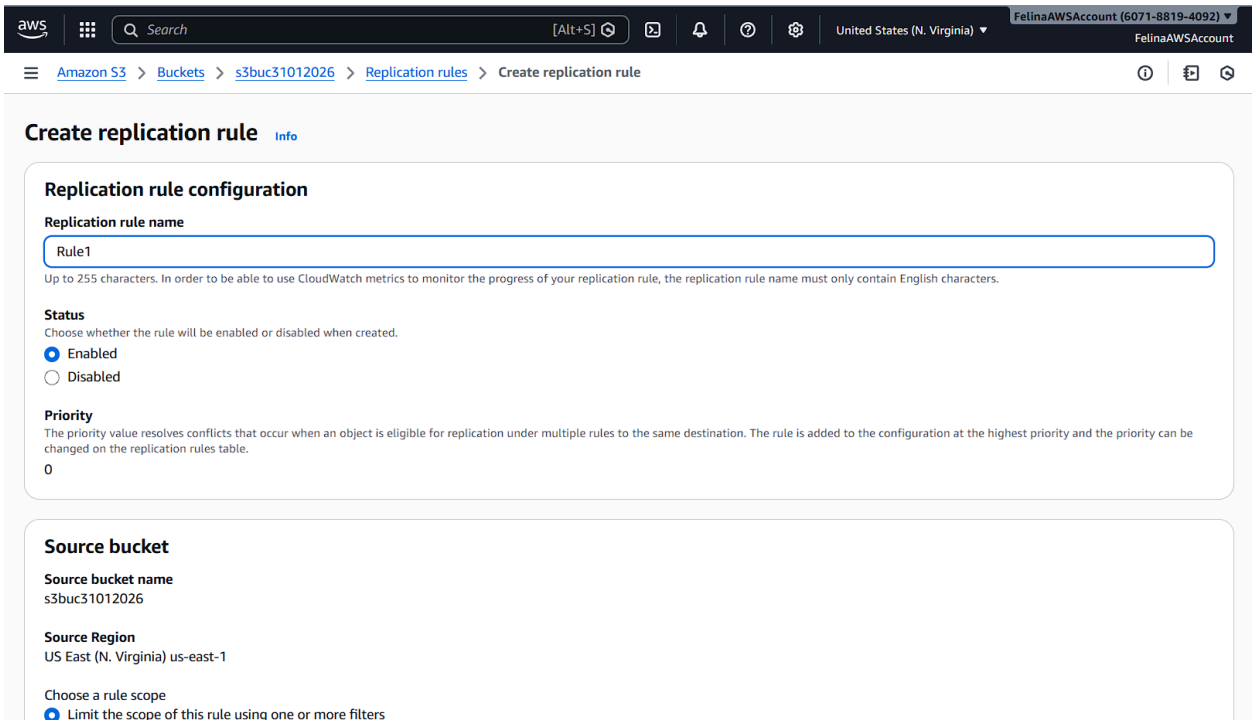
Create a source bucket and a destination bucket by enabling bucket versioning and static website hosting in both the buckets.
Edit the bucket policy and copy paste the s3-demo1-bucket_policy for both the buckets.



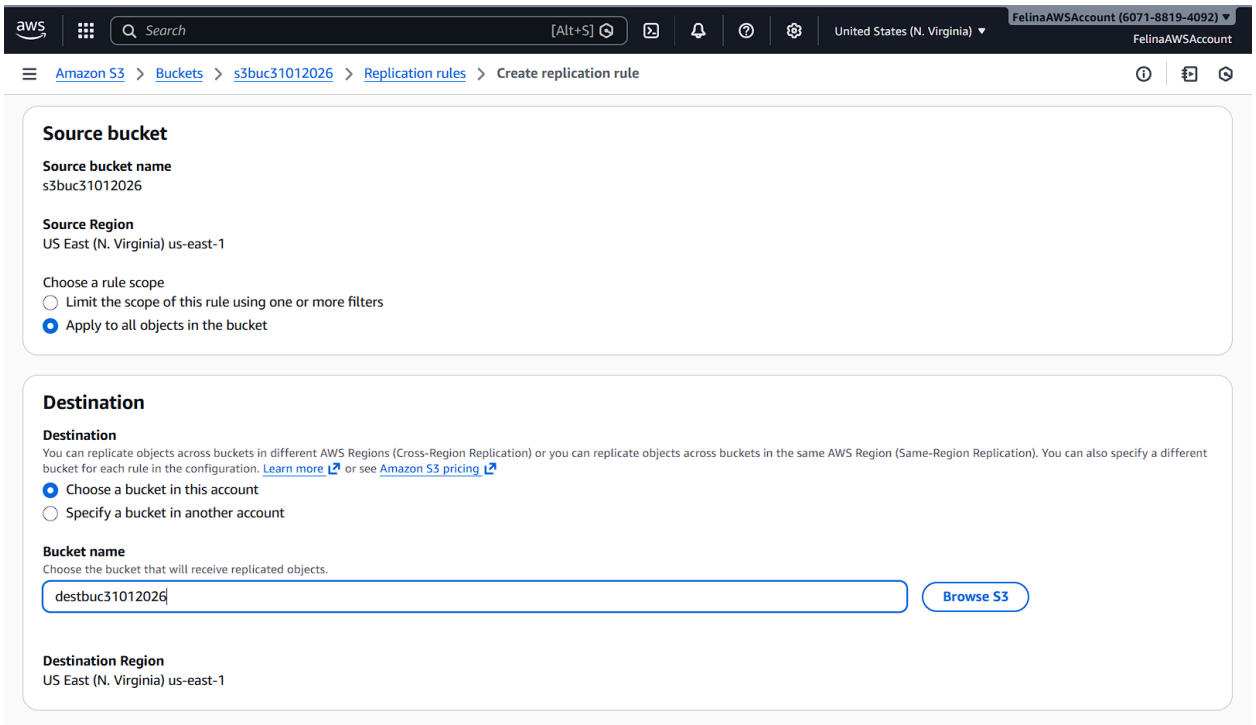
Select the source bucket-> Management-> Create replication rule



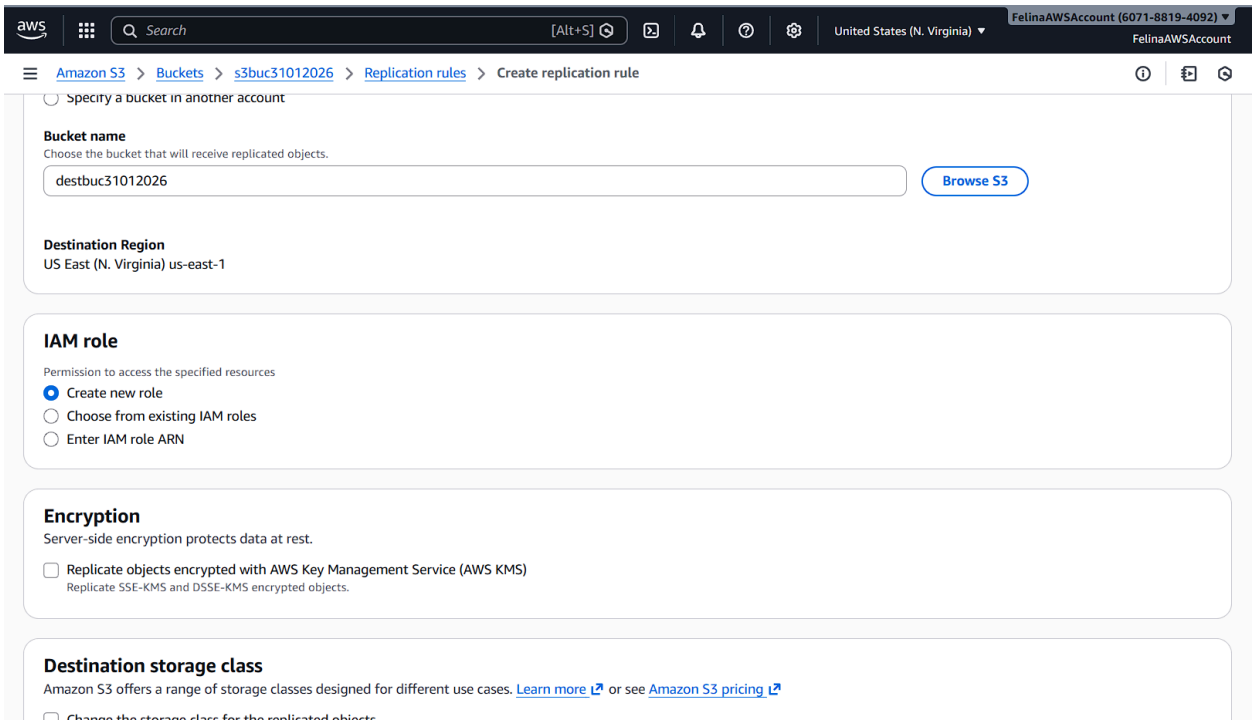
Specify rule name



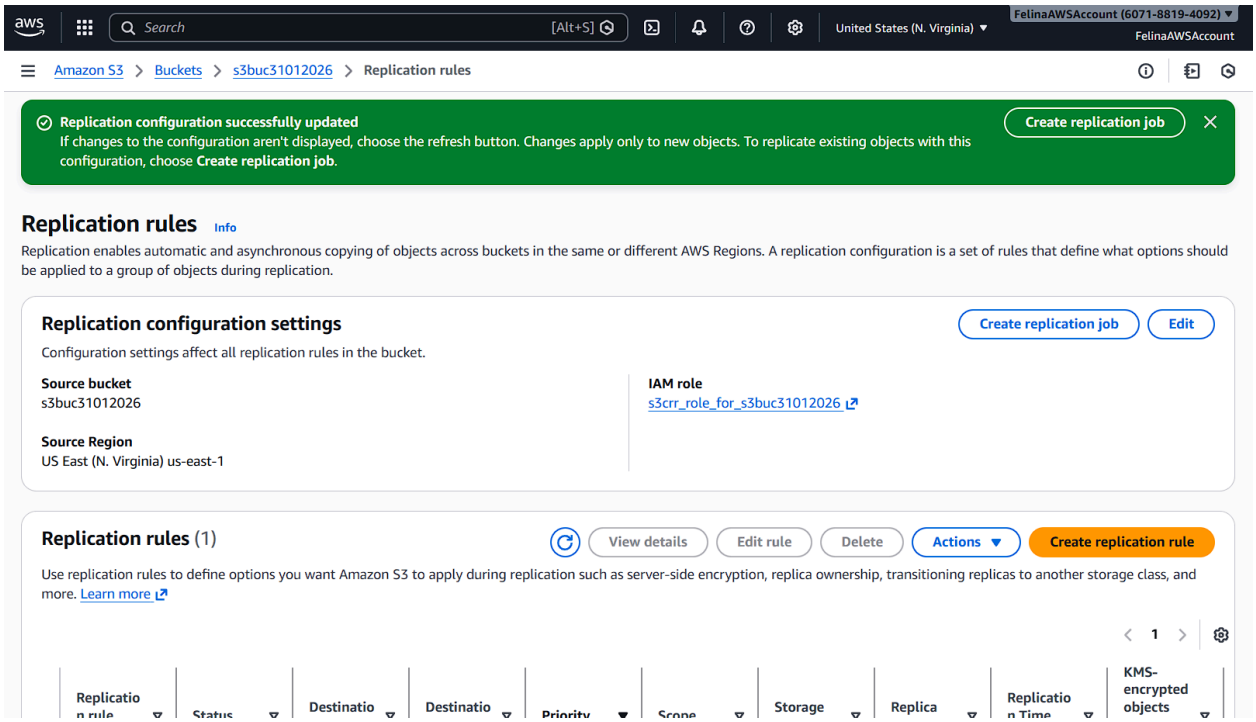
Tick “Apply to all objects in the bucket” option and browse the destination bucket.



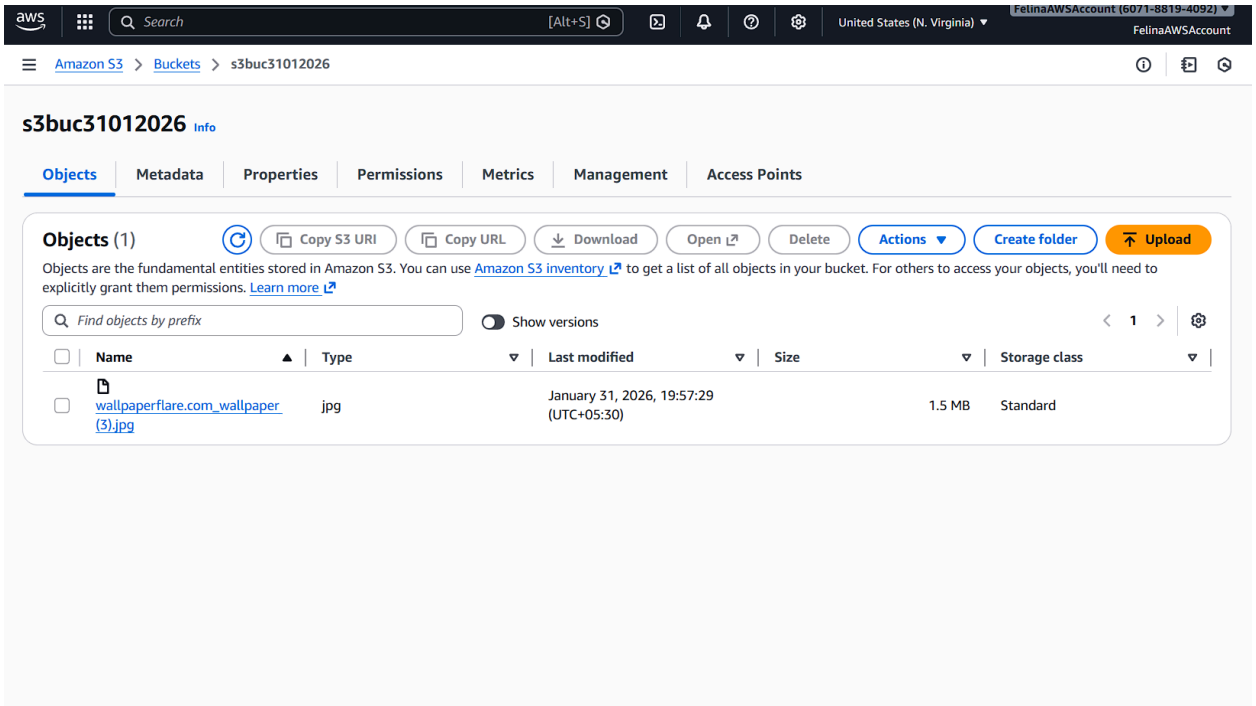
In the IAM role, choose create new role.

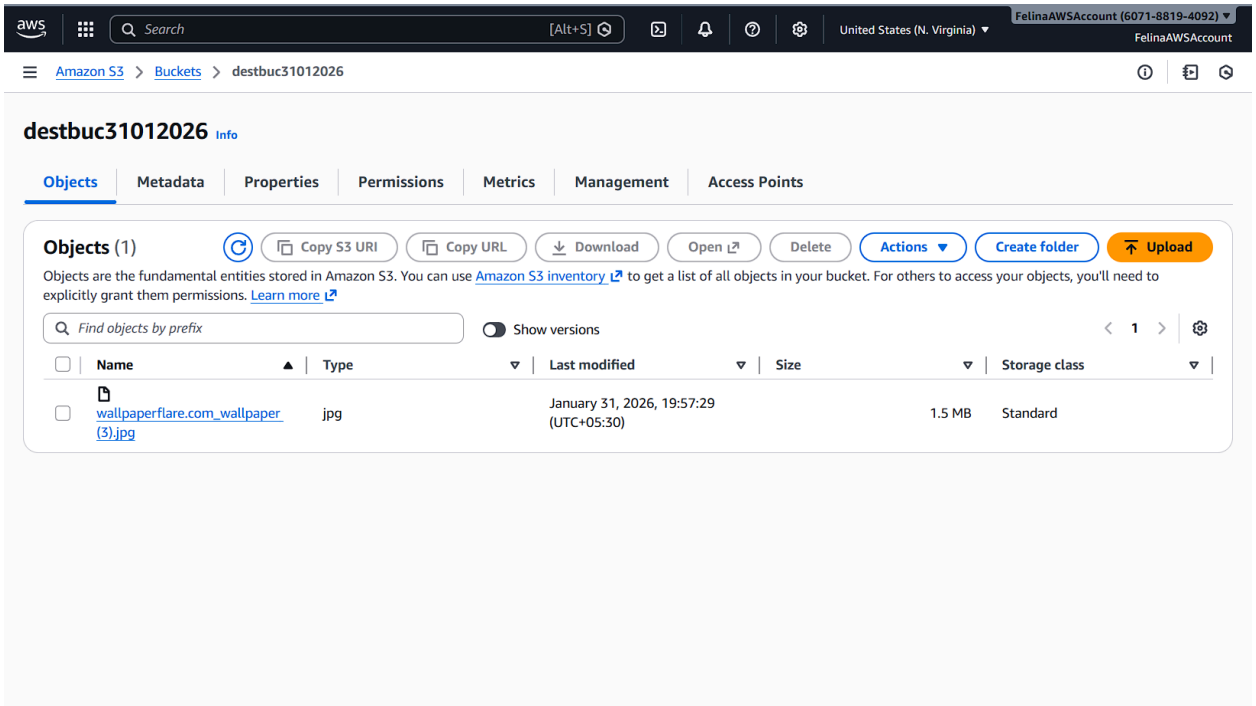


Rule has been created



Upload files in source bucket.





Changes will be reflected in destination bucket.
